

GES

Abrasive wear plate

A leading supplier of high quality, durable wear plates

Super strong and durable steel for heavy machinery

www.ge-spares.com

welcome

GES is a leading supplier of Abrasive Wear Plate and Special Steels to the mining, construction, agriculture and recycling industries. Through its quest for excellence, GES is geared to be the perfect partner to OEMs for all their abrasive wear plate and special steel needs. We focus in 400BRN, 450BRN and 500BRN steel plate as our core capability, along with high strength tensile steels.

about us

GES specialises in the profiling, milling and fabrication of abrasive wear plate and screening products, all under our 55,000 ft facility. Our customer base boasts the majority of the leading OEMs in the crushing and screening sectors.

GES established in 2010 when its management team saw an opportunity in the market of being the premium supplier of high quality wear plates, providing local OEMs with their wear plate requirements and as such invested significantly in suitable equipment designed for working with abrasive steel. GES only use the best tried and trusted suppliers of wear-resistant steel, offering excellent consistency and surface quality.

In 2012 GES acquired Sharp Screening Products, who manufacture piano wire strings. Sharp Screening manufacture Speedharps for all brands of mobile and static screeners and offer a variety of options for our customers.

products

GES core expertise is in the manufacture and supply of abrasive wear plate. Our wear plate products include:

- Impact Liner Plates
- Chute Liners
- Dumptruck Trays
- Tipper Bodies
- Trawl Doors
- Punch Plate
- Wear Plate Assemblies
- Excavator Buckets
- Cutting Edges
- Shredder Teeth

wear plates

GES Manufactures its own Piano Wire (Speedharp) screens in house through its wholly owned subsidiary Sharp Screening Products. Sharp has been manufacturing Speedharps for its customers since 2003. Speedharp screening is the most efficient way of screening fines worldwide. Speedharps will screen at twice the rate of the equivalent aperture woven wire, meaning more tons per hour of production.

speedharps

GES manufactures a range of parts for the agricultural industry from special steels, whether wear resistant or high tensile strength is the requirement. products where special steels are being used in include:

- Ploughs
- Screw Feeders
- Harrows
- Stone Collecting Machines
- Muck Spreaders
- Wheat Silos
- Vertical Feed Mixers/Diet Feeders
- Cultivators
- Forks & Grabs
- Tipper Trailers
- Ripper Teeth
- Subsoilers
- Forage Harvesters

agricultural parts

GES supplies Skirting Rubber and Cushion rubber. Skirting rubber is designed for the prevention of spillage and to contain loads on conveyor systems. We typically stock skirting rubber in roll widths of 70mm, 90mm, 100mm, 150mm, 175mm and 200mm. These are usually provided in 10mtr and 15mtr lengths. We can offer a range of shore hardness and the option of alternative roll widths. Our Red Skirting rubber is our leading product as it gives much greater wear life.

rubber

GES stocks and can supply a large range of wedge bolts and liner bolts used for holding Liner plates and Cheek plates in position in Jaw crushers and Impact crushers. We can manufacture these bolts to your own specification.
